JOURNAL OF THE OPTICAL SOCIETY OF AMERICA VOLUME 41, NUMBER 12 DECEMBER, 1951

Annual Subject Index to Volume 41

Key to Index use

1. **Subjects,** not titles, have been indexed.

2. **Contents** of papers (and abstracts of papers presented at meetings) have been indexed rather than a word breakdown of the title.

3. Principal subjects are given in **boldface** type. Cross-referenced subjects which should be consulted for a more thorough coverage are given in *italics* after the principal subject.

4. (A), (L), (B), (P), (N), etc., indicate (A) Abstracts of meeting papers; (L) Letters to the Editor; (B) Book Reviews; (P) Personalia; and (N) Notes. In the case of abstracts of meeting papers, since several abstracts appear on the same page and often on the same or similar subject, the abstract number is also given. If the paper covered by the abstract has been submitted and published in the same year as the abstract, this has been indicated by a solidus (/) between the abstract notation and the Journal page of the full article, i.e., 264 (A*67*)/589 indicates that the paper described in abstract No. *67* on page 264 has been published in full on page 589.

Book Reviews and Letters to the Editor have not been as thoroughly broken down into subjects but have been confined to principal subjects and separate listings under headings of Book Reviews and Letters to the Editor, which in the former have included authors and reviewers.

5. Subjects have been indexed in subdivisions according to key words with prepositions such as "on," "in," "of," "with," etc., included where essential for euphonious interpretation, but not affecting the alphabetical arrangement of the principal subject. In many cases, where obvious, these prepositions have been omitted.

Aberration, aspheric correctors of silver chloride for Kellner-Schmidt system—510
calculation of, by automatic machine—289(A*45*)/630
correction, final, formula for—727
excentration in—873(A*46*)
lenses, in variable power system—863(N)
Seidel approximation
calculated with automatic machine—874(A*48*)
effect of decentration in—873(A*46*)
spherical
differential correction of—389
mathematical analysis of—647(L)
in spurious resolution of lenses—600
in thin plastic Fresnel lens—807
transverse, in silver chloride correctors for Kellner-Schmidt system—510
wave theory of—363(B)

Absorption (see also *Spectra*)
beta-particle, in measuring mass per unit area of thin films—862(L)
of germanium in infrared—730(L)
of pyrite in infrared—730(L)
of silicon in infrared—730(L)
Absorption Coefficient, aluminum—1047
metals, determined interferometrically—1047
silver—1047
Actinium, emission spectra of—867(A*6*)
Air, dispersion of—295
refractive index of—295
Alignment, precision in daylight—277(L), 278
Alignment Chart, thickness of evaporated films—362(L)

atmospheric—473
geometrical factors—460
Light Meter, integrating for fading tests—875(A*56*)
Light Sources (see also *Sources* and *Spectra*)
arc
carbon, for infrared microspectroscopy—867(A*4*)
dc, igniting in vacuum—646(L)
helium discharge, output as function of time—619
hydrogen, for source of ultraviolet—293(A*65*)
xenon compact—290(A*51*)/385
high temperature for infrared—289(A*39*)/626
spark discharge, excitation temperature of—440
tungsten incandescent for infrared spectroscopy—289(A*39*)/626
wires, exploding—445
Lithium, isotope spectral shifts—870(A*20*)
Lithium Fluoride, crystals, optical, thermal, mechanical properties of—215, 772
Loofbourow, John R., necrology—214(P)
Luminance (see also *Brightness*)
color discrimination, influenced by—684
differences, sensitivity to—684
low
appearance of colors at—876(A*60*)
photometry—733(B)
perception of white, affected by—521, 787
visual resolution affected by—517
Luminous Ceilings, glare-free—98
Luminescence (see also *Phosphors*)
amplification of radiant energy—209(L)
fluorescence
colorimetry, matrix notation—285(A*10*)
reflectance of materials
measured by Beckman spectrophotometer—872(A*38*)
measured with G. E. spectrophotometer—872(A39)/1060(L)
spectra
correction for light absorption—482(L)
liquids, highly colored—450
photoelectric measurement of—450
visible, test for—558(L)
whitening agents, colorimetry of—284(A*9*)
organic compounds—279(B)
photographic plates ultraviolet sensitized—292(A*50*)
resin fluorescent for ultraviolet sensitization—292(A*50*)
spectra, emission
mercuric tungstate—731(L)
zinc silicate, manganese activated—558(L)
spectra, emission at low temperature
cadmium sulfide—816
silver activated—816
zinc sulfide
copper activated—816
silver activated—816
zinc tungstate—816
spectra excitation
cadmium tungstate—57(L)
calcium tungstate—57(L)
magnesium tungstate—57(L)
zinc tungstate—57(L)
thermo, of zinc silicate phosphors—644(L)
strontium silicate phosphor—718
zinc sulfide phosphors—718
transparent films—559(L)
Lyman Region, reflectance measurements—290(A*50*)

Magnesium Oxide, reflectance of—288(A*28*)/419
Meggers, William F., received honorary Doctor of Science Degree—653(P)
Mellon, M. G., received Fisher award—865(P)
Merton, Sir Thomas, awarded Halweck prize—563(P)
Metallurgy, microspectroscopy microdrills—1061(L)
Metrogon Lenses—292(A*58*)
Microphotometer (see also *Densitometer*)
granularity measurements of photographic deposits—192
projection, improved slit for—56(L)
Microscope (see *Microscopy*)
Microscopy, electron, course in, at Cornell University, July, 1951—365(N)
infrared—289(A*38*)/547
interference, symposium (I.C.O.) Paris, May, 1951—486(N)
objectives—289(A*46*)
empirical study of performance—111
Schwarzschild, amplitude loss computed—183
phase contrast
edge effect—134
symposium (I.C.O.) Paris, May, 1951—486(N)
planapochromatic system—289(A*46*)
polarizing and crystals—363(B)
reflecting, with spherical mirrors—111, 183
Millikan, Robert A., autobiography of—59(B)
honorary member of the Optical Society—63(N)
Mirrors (see also *Films* and *Reflection*)
Raman tubes for gases—712
Schwarzschild arrangement—183
spherical, for reflecting—111, 183
Monochromator, Hilger-Müller Double—329

plane grating, resolution of —286(A*16*)
vacuum ultraviolet grating—696

National Bureau of Standards, fiftieth anniversary recognized by Optical Society of America—367(N)
and Optical Society of America—369
optical work at—369
National Physical Laboratory, announcement of jubilee, 1900–1950—740(N)
National Research Council, committee on infrared absorption spectra—864(N)
Division of Physical Sciences—429(N)
News Report—429(N)
National Technical Conference on Lighting, Washington, August, 1951—487(N)
Necrology

Zworykin, V. K.—366(P)
Phase Contrast, colored—871(A*30*)
edge effect—134
gratings tested by—871(A*27*)
microscopy, symposium, (International Commission of Optics) Paris, May, 1951—486(N), 733(N)
variable apparatus with interferential phase ring—871(A*30*)
Phosphors
cadmium sulfide—816
silver activated—816
cadmium tungstate—57(L)
calcium tungstate—57(L)
coatings on photomultipliers for ultraviolet—702
electron trapping states in—718
excitation spectra of tungstates—57(L)
films, transparent luminescent
zinc cadmium—559(L)
zinc sulfide—559(L)
manganese activated—559(L)

Phosphors (continued)
infrared irradiated—718
magnesium tungstate—57(L)
mercuric tungstate—731(L)
potassium iodide, thallium activated—816
strontium silicate, europium activated—718
zinc sulfide
copper activated—816
copper and lead activated—718
manganese and copper activated—718
manganese and lead activated—718
silver activated—816
zinc silicate
magnesium activated—816
manganese activated—558(L)
thermoluminescence of—644(L)
zinc tungstate—57(L), 816
Photocell, electron multipliers and new image-converter-type tube—361(L)
spectral sensitivity of, increased—361(L
Photochemistry, rhodopsin in rod vision—288(A*33*)/949
Photoconductivity, selenium films, vacuum coated—53, 288(A*35*), 871(A*29*)
Photoelectric Spectrometry Group—428(N)
Photographic Emulsions (see also *Photography*)
calibration, by gamma-nomograph—731(L)
chromaticity, C.I.E. determination—293(A*68*)
development, technique for uniformity—868(A*10*)
development time
intensity exponent in photographic equation—291(A*53*)
saturation density—291(A*53*)
equation for log *D* curve
development time and its effect on—291(A*53*)
exposure—255, 862(L)
granularity—255, 862(L)
microphotometer for measurement of—41, 64, 192
hypersensitization by pre-exposure—255, 862(L)
intensity exponent in photographic equation development time—291(A*53*)
latent image structure—732(L)
minimum energy detected by—291(A*55*)
pre-exposure for hypersensitization—255, 862(L)
reciprocity law failure, intermediate intensity—560(L)
resolving-power—265
camera—265
as function of relative aperture of camera lens—1038
response—255, 862(L)
saturation density and development time—291(A*53*)
sharpness—265
symposium, (University of Paris—National Center of Scientific Research), Paris, September, 1951—481(N)
Photographic Objectives (see *Lenses*)

modern industrial, course at Boston College, July 1951—428(N)
Spectrometer, Spectrometry, Spectrophotometer, Spectrophotometry (see also *Photometry*)
autumn leaves—284(A*7*)
Beckman DU modified for near infrared—277(L), 658
cathode-ray tube for displaying spectrophotometer curves—291(A*52*)
data shown on cathode-ray tube—291(A*52*)
fluorescence test in visible spectrum (by attachment for G.E. spectrophotometer)—558(L)
fluorescent materials, reflectance of
measured with Beckman instrument—872(A*38*)
measured with General Electric instrument—872(A*39*)/997
General Electric Recording ordinate printing attachment—1060(L)
grating
with linear wavelength scale—125
plane, resolving power of—286(A*16*)
for ultraviolet and visible—1002
infrared
absorption cells with multiple paths—1059(L)
double beam system—867(A*3*)
design and performance—32
grating
calibration with methane and water absorption bands—867(A*2*)
mount for reflection—179

micro—289(A39)/547
prism
calibration of—56(L), 1006
near, with modified Beckman DU—277(L), 658
oscillographic recording, fast scanning—665
propellant flames measured by fast scanning—665
refractive index measurements with—166
optical density optimum—58
reflectance of magnesium oxide—288(A28)/419
standards, magnesium oxide—288(A28)/419
static multislit infrared spectra—468
transmittance
measurements of small area specimens—427(L)
optimum—560(L)
ultraviolet grating—1002
Universal—214(N)
visible grating—1002
Wadsworth grating (2000–14,000A)—125
Spectroradiometer, ultraviolet and visible regions—292(A63)
Spectroscopy
astronomical—153
f:1.0 camera—169
British Bulletin of—1067(N)
chemical—279(B)
communication theory—405, 867(A1)
experimental—648(B)
infrared
course in—213(N)
by reflection—336
source
incandescent tungsten—289(A39)/626
for micro—867(A4)
micro, carbon arc source for—867(A4)
wavelength calibration by interference—427(L)
international organizations—565(N)
micro—547
metallurgical—1061(L)
resolution, slit width—405
Symposium
(Joint Commission for Spectroscopy), September, 1950—594(N)
on molecular, Basel, Switzerland, June, 1951—1067(N)
on molecular structure, (Ohio State University—American Physical Society)—Columbus, Ohio, June, 1951 27(N), 365(N), 652(N)
theory, line widths—867(A1)
ultraviolet, detectors, fluorescent sensitized photomultipliers—702
Sphalerite, refractive index of—416
Standardization, of safety colors—874(A53)
of signal light colors—874(A52)
Standards, candlepower, variation in horizontal distribution of intensity—513
length, of an atomic nature—429(N)
magnesium oxide
colorimetry—288(A28)/419
photometry—288(A28)/419
spectrophotometry—288(A28)/419
reflectance—288(A29)
Standards Eastern Automatic Computer (SEAC)—289(A45)/630
Steel, spectrochemical analysis of—286(A17), 869(A18), 870(A24)
Strontium, infrared emission spectra of—286(A19)
Style Manual, American Institute of Physics—566(N), 567(E), 568
Sulfur, spectrographic analysis of, in engine deposits—412
Sunglasses, perception of small color differences—286(A21)
visual acuity—23
Symposia, analytical chemistry (American Chemical Society—Pittsburgh Spectroscopy Society) Pittsburgh, March, 1951—93(N)
March, 1952—741(N)
auroral physics (University of Western Ontario—Air Force Cambridge Research Laboratories) London, Ontario, July, 1951—487(N)
illumination, Paris, September, 1951—487(N)
International Scientific Radio Union and The Institute of Radio Engineers, April, 1951—90(N)
molecular spectroscopy, Basel, Switzerland, June, 1951—1067(N)
molecular structure and spectroscopy (Ohio State University—American Physical Society)—June, 1951—27(N), 365(N), 652(N)
optical image (National Bureau of Standards), Washington, October, 1951—487(N)
phase contrast and interference microscopy, (International Commission of Optics) Paris, May, 1951—486(N)
photographic emulsions (University of Paris—National Center of Scientific Research), September, 1951—487(N)
spectroscopy (Joint Commission for Spectroscopy), September, 1950—564(N)
spectroscopy, applied (American Chemical Society—Pittsburgh Spectroscopy Society) Pittsburgh, March, 1951—93(N), March, 1952—741(N)
vision (Ohio State University), Columbus, Ohio, June, 1951—565(N)

Tantalum, emission spectra of—867(A5)
Technical Calendar—62(N), 142(N), 213(N), 280(N), 365(N), 430(N), 486(N), 566(N), 654(N), 741(N), 865(N), 1069(N)
Technical Publications, Bausch and Lomb optical parts catalog—565(N)
Better Analysis, (Vol. 2, No. 2) Baird Associates—741(N)
Calco Technical Bulletin, No. 820—864(N)
Federal Color Card for Paint—649(N)
Instrument News (Vol. 2, No. 4) Perkin-Elmer—741(N)
Kodak Color Handbook—142(N)
optics and photography bulletin (Research Information Service)—2(N)
Polaroid Reporter—281(N)
Synthetic Optical Crystals, Harshaw Chemical Co.—741(N)
Telephotometer, photoelectric for aerial measurements—305
Telescopes, dioptometer for study of—94
thermal problems in daytime telephotography—877(A67)
Television, image-correcting lens for, projection—1066(N)
Temperature, gas, measured by radiation pyrometer—872(A35)
glass, measured by radiation pyrometer—872(A36)
Test Chart, resolving power—597
Textiles, color differences, formula for—284(A8)/760
color of dye mixtures predicted—875(A55)
illumination effect on color of dyed—396
Munsell renotation color book in dyed wool—287(A24)/623
Thallium Bromide-iodide (KRS-5) polarizer in infrared—1063(L)
Thermal Conductivity, crystals—288(A36)/1062(L), 871(A31)
improved device for measuring—871(A31)
Thermocouple, vacuum ultraviolet spectral intensities measured by—699
Thermoluminescence, strontium silicate phosphor—718
zinc sulfide phosphors—718
zinc silicate phosphors—644(L)
Thermopile, ambient temperature independent, for radiation pyrometry—823
mathematical theory of—823
Tolansky, S., lectures in U. S. on multiple beam interferometry—345(P), 742(P)

Transmission, atmosphere, effect of field of view in measurements of—876(A*60*)
cesium bromide (0.32 to 38 μ)—209(L)
lithium fluoride, infrared and ultraviolet—772
metal films on nonabsorbing backing—604, 1071
optimum in spectrophotometry—560(L)
prism—331
spectrophotometer, measurements—427(L)

Ultraviolet, fluorescent sensitized photomultipliers for—702
extreme, measured by photon counters—292(A*61*)
irradiation of strontium silicate phosphor—718
sensitivity of quartz and glass enveloped photomultipliers—802, 1071
sensitization to, with fluorescent resin—292(A*50*)
vacuum
monochromator for—696
thermocouple measurements of spectral intensities—699

Vectographs—284(A*1*)/957
Vision
aberration, eye
chromatic—80
spherical—80
accommodation—288(A*32*)/942
in dim light—80
and night myopia—1061(L)
achromatopsia, congenital—287(A*23*)
acuity through sun glasses—23
adaptation
effect on perception of white—787
influence on loci of constant hue and saturation—615, 1071
monocular in anisopic stereo-effect—676
anisopia, effect on space perception—676
binocular—860(B)
researches in—363(B)
brightness
and critical fusion frequency—1010
relationships—28, 235
Bunsen-Roscoe law validated—743
color
discrimination
absolutely identifiable differences—1057(L)
influence of luminance level on—684
retinal mechanism—288(A*30*)/895, 918
anatomy of—918
physiology of—918
psychophysics of—895
theory of—787
theory—retinal mechanisms—288(A*30*)/895, 918
comfortable seeing—235
cone—120, 130, 354
constancy of hue and saturation—615
contrast, effect on visual resolution by human eye—517
dark adaptation—210(L)
level and duration of test flash—130
preceded by intermittent and continuous light—120
psychophysical methods for determining—868(A*11*)
radiation—354
red preadaptation—287(A*22*)
surround luminance—354
time of, after stimulation by various luminances and color—402
excitation thresholds—354
eye as image forming mechanism—860(B)
eyes and industry—1065(B)
illumination, distribution in foveal image—868(A*13*)
image, distortion by prisms—869(A*14*)/1023
foveal, distribution of illumination—868(A*13*)
intensity-duration function in stimulation of peripheral retina—743
low luminances, appearance of colors at—876(A*60*)
luminosity curve—733(B)
modes of appearance, commercial materials—284(A*6*)
myopia
night—80, 288(A*32*)/942
accommodation—1061(L)
perception—484(B)
of white—521, 528, 787
of small color differences with tinted sun glasses—286(A*21*)
psychophysical definition of white—521, 528, 787
red preadaptation
brightness threshold—287(A*22*)
dark adaptation—287(A*22*)
resolution
by human eye—517, 868(A*13*), 882
optic nerve fibers—288(A*31*)
retinal
color mechanisms—288(A*30*)/895, 918
stimulation, intensity-time relationship—743
threshold—426(L)
rod—120, 130, 354
photochemical basis of—288(A*33*)/949
polarization method of studying—478
scotopic sensitivity—868(A*12*)
sensitivity—210(L)
to surface color differences—104
and threshold excitation—120, 130
space perception altered by anisopia—676
suprathreshold area brightness relationships—28
symposium (Ohio State University), Columbus, Ohio, June, 1951—565(N)
threshold, theories of—278(B)

Water, absorption spectrum in infrared of liquid—302
Williams, Van Zandt, named Vice President and Director of Sales and Research, Perkin-Elmer Corporation—61(P)
Wires, exploding, as a light source—445
Wood, Francis Carter, necrology—214(P)
Woodrow, Jan W., necrology—1068(P)
Woodson, Robert A., appointment as Optical Engineer, International Business Machines—1068(P)

Xenon, arc lamp—290(A*51*)/385
X-rays, quartz crystals irradiated with—377
solar, measured by photon counters—292(A*61*)

Zeeman Spectra, chromium II—286(A*20*)
tantalum—867(A*5*)
Zworykin, V. K.—awarded Progress Medal by Society of Motion Picture and Television Engineers—366(P)
